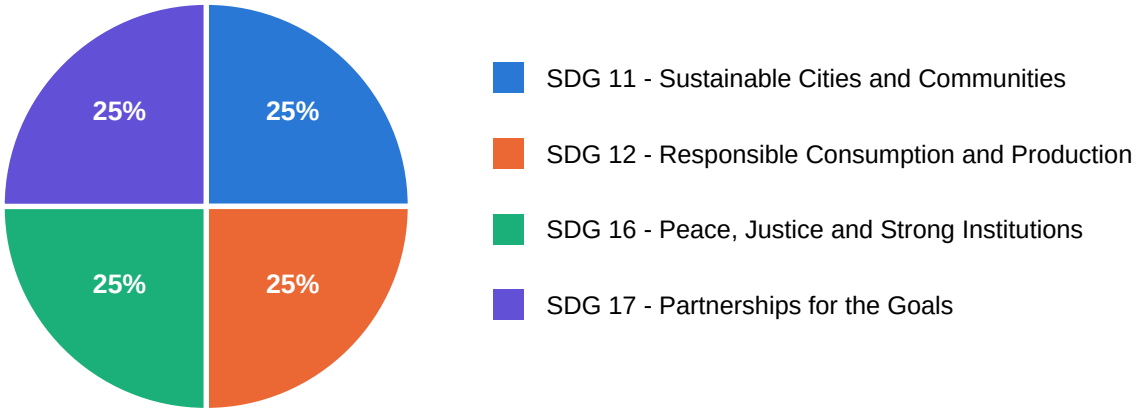
CivicOrbit - SDG Report

Based on PBL_Presentation.pdf

Summary

Total SDGs used: 4 - SDG 11, SDG 12, SDG 16 and SDG 17, as listed on the "Project Idea" slide. The presentation gives no weighting between them, so the pie chart shows four equal slices of 25% each. The chart shows how many goals were used, not how much each one contributes.

SDG Distribution



How each SDG connects to the project

SDG	Goal	How CivicOrbit supports it
11	Sustainable Cities and Communities	Civic participation and engagement with local governance
12	Responsible Consumption and Production	Digital-first verification reduces paper trails and manual record-keeping; encourages mindful, accountable use of civic resources
16	Peace, Justice and Strong Institutions	Transparency, accountability, and trust between citizens and institutions
17	Partnerships for the Goals	Connecting citizens, NGOs, and civic organizations

Explanation

SDG 11 (strong fit). The core fit. Everyday actions like voting, complaints, petitions, volunteering and donations become verified Civic Points, making participation in local governance visible and rewarding.

SDG 16 (strong fit). Closely tied to the problem statement. Making participation measurable and transparent is meant to strengthen trust between citizens and institutions, and the AI verification and anti-fraud checks support accountability.

SDG 17 (medium fit). Matches the business model, where municipal bodies, NGOs and CSR organizations can sponsor city or organization leaderboards and campaigns.

SDG 12 (weak fit). The weakest link. The paper-reduction argument is valid, but it is a side benefit rather than the app's main purpose. Be ready to explain the connection or call it secondary if a reviewer asks.

Suggestion

Add one measurable indicator for each goal, such as the number of verified civic actions per city for SDG 11, to strengthen the report.

Note: the strength-of-fit ratings are an assessment, not something stated in the presentation.
